Smart Parking System, Project ID = 6.	BDS-5A

Department of Computer Science

FAST-NU, Lahore, Pakistan

Project Title:
ParkEase - Smart Parking System

Objective:
The aim of this project is to design and develop a Smart Parking System that helps drivers find available parking spots quickly and efficiently. The system will reduce time spent searching for parking, minimize traffic congestion, and optimize the use of parking spaces by providing real-time information about spot availability.

Key Features:

- **User Registration and Login:** Secure login for users with password reset functionality.
- **Parking Slot Booking:** Allow users to check availability and reserve parking slots in advance.
- **Admin Management:** Enable administrators to add, remove, and update parking slots and monitor system usage.
- **Real-time Availability:** Display available and occupied slots dynamically.
- **Reports & Analytics:** Generate reports on parking usage, peak times, and slot occupancy.
